Professional Summary

DevOps Engineer with 2+ years keeping production systems reliable across AWS, GCP, and Azure. Migrated 240+ Azure resources to Terraform IaC, run daily deployments across 10+ containerized services for 8+ developers, and operate a production microservices platform on GKE with Istio and ArgoCD. Skilled at CI/CD automation with Jenkins and GitHub Actions, resolving production incidents, and enforcing least-privilege security. HashiCorp Terraform Associate, AWS Cloud Practitioner, and RHCSA certified.

Technical Skills

Cloud Platforms: AWS, Google Cloud Platform (GCP), Azure, DigitalOcean

Containers & Orchestration: Docker, Kubernetes, GKE, Helm, Istio

Infrastructure as Code: Terraform, Terragrunt, Remote State Management, AWS CDK, Ansible

CI/CD & GitOps: Jenkins, GitHub Actions, GitLab CI/CD, Bitbucket Pipelines, ArgoCD, Git

Networking & Web: Nginx, VPC, DNS, SSL/TLS, mTLS, Load Balancing, CloudFront CDN

Security & Governance: IAM, RBAC, AWS Organizations, SCPs, AWS SSO, Least-Privilege Access

Monitoring & Troubleshooting: CloudWatch, Prometheus, Grafana, SonarQube, Dozzle, K8s Debugging

Databases: PostgreSQL, MySQL, Redis, MongoDB

OS: Linux Administration (Ubuntu, RHEL)

Professional Experience

Junior DevOps Engineer, Inexture Solutions **May 2025 – Present**

Ahmedabad, India

- Run daily deployments across 10+ containerized backend, frontend, and AI services on Docker-based standalone servers, supporting 8+ developers across multiple teams with reliable, repeatable releases.
- Operate a production microservices platform on private GKE behind an Istio service mesh with mTLS, managing an ArgoCD GitOps setup for declarative deployments and maintaining secure ingress routing and RBAC access across environments.
- Build and maintain CI/CD pipelines in Jenkins and GitHub Actions with SonarQube quality gates, automated tests, and rollback steps, cutting manual release effort and keeping deploys consistent.
- Migrated Jenkins from legacy bare-metal to a Docker-based setup through a staged rollout, improving reliability and scalability with near-zero production downtime.
- Diagnose and resolve container runtime failures, scaling bottlenecks, and multi-environment deployment issues for development teams, documenting root cause and fixes to prevent repeat incidents.
- Operate containerized apps on AWS and GCP with Docker, Nginx reverse proxy, SSL/TLS (Certbot), and CloudFront CDN across monorepo pipelines with conditional build stages.

DevOps Engineer, Highskyit Solutions **Feb 2023 – Feb 2024**

Ahmedabad, India

- Migrated 240+ Azure resources from manual portal management to Terraform IaC, authoring reusable modules for App Services, API Management, Logic Apps, Service Bus, Storage, and Key Vaults with zero manual portal changes in production.
- Cut infrastructure code duplication by roughly 70% with shared dynamic modules and standardized naming and tagging, making new-environment provisioning noticeably faster and less error-prone.

- Supported administration of multi-account AWS environments using AWS Organizations, SCPs, and AWS SSO, helping enforce governance and least-privilege access controls. With Terragrunt managing isolated variables and remote state across dev, staging, and production.
- Automated infrastructure deployments through Bitbucket pipelines with mandatory peer review, improving change traceability and reducing configuration drift.
- Built and maintained a version-pinned custom Docker image for a VoIP calling server, eliminating configuration drift across client deployments.

Career break Mar 2024 – Apr 2025 for family healthcare responsibilities; stayed hands-on through cloud labs and earned the HashiCorp Terraform Associate certification.

Key Projects

- **Service Marketplace Platform on GKE** *GKE · Istio · ArgoCD · Cloud SQL*
  - **Problem:** A multi-environment marketplace needed stable releases and quick incident recovery under live production traffic.
  - **Solution:** Operated workloads on private GKE Autopilot clusters with Anthos Service Mesh (Istio) and managed an ArgoCD GitOps pipeline; tuned RBAC, ingress, and private Cloud SQL connectivity, and resolved deploy and runtime issues across dev, staging, and production.
- **Azure to Terraform IaC Migration** *Terraform · Azure · Reusable Modules*
  - **Problem:** 240+ Azure resources were managed manually in the portal, causing drift and risky, non-repeatable changes.
  - **Solution:** Catalogued every resource and migrated it to Terraform with resource-by-resource imports and plan-only PRs (no destroy-and-recreate in production); built reusable modules that cut code duplication by 70%.
- **AWS Multi-Account Governance** *AWS Organizations · Terragrunt · SCPs · SSO*
  - **Problem:** Multiple AWS accounts needed consistent guardrails and least-privilege access without slowing teams down.
  - **Solution:** Provisioned multi-environment infrastructure with Terragrunt (isolated variables, shared remote state) and enforced governance with AWS Organizations, SCPs, and AWS SSO.
- **Kubernetes Cluster – Kafka & ZooKeeper** *Kubernetes · DigitalOcean · StatefulSets*
  - Designed and deployed a Kubernetes cluster on DigitalOcean for Apache Kafka and ZooKeeper distributed messaging, configuring StatefulSets, persistent storage, ingress, and basic monitoring.
- **Test-Gated CI/CD & Cost Estimation** *Jenkins · CI/CD · Cost Optimization*
  - Built a test-gated Jenkins pipeline that blocked broken builds before merge into Dev, improving release reliability; provided cloud cost estimates to guide client infrastructure decisions.
- **AI Platform Deployments – 7+ PoCs (Deployment & Infra)** *Jenkins · Docker · Nginx · SonarQube*
  - Owned deployment and infrastructure for 7+ AI/ML PoCs (enterprise GPT, multilingual AI, mock-interview, agentic catering, image processing); application and model development were owned by separate teams.
  - Built Jenkins pipelines with SonarQube gates, Docker containerization, Nginx reverse proxy, and Certbot TLS, including monorepo pipelines with conditional stages and GPU-runtime setup for model serving.

Certifications

- HashiCorp Certified: Terraform Associate (003)
- AWS Certified Cloud Practitioner
- Red Hat Certified System Administrator (RHCSA)

Education

Bachelor of Commerce (B.Com)
M.D.S. University, Rajasthan
2020 – 2023
