Summary

DevOps and Platform Engineer with 2+ years of production experience across AWS, GCP, and Azure, specialising in container orchestration (Kubernetes, GKE, Istio), Infrastructure as Code (Terraform, Terragrunt), and CI/CD automation for SaaS, fintech, and AI workloads. Migrated 240+ cloud resources to Terraform IaC reducing code duplication by ~70%, operated production GKE clusters with mTLS-based service mesh, and owned end-to-end deployment for 7+ AI/ML platforms. Security-first, automation-by-default mindset backed by HashiCorp Terraform Associate, AWS Cloud Practitioner, and RHCSA certifications.

Core Competencies

- | | | | |
|------------------------|----------------------------|--------------------------|------------------------|
| ◦ Kubernetes | ◦ Terraform / Terragrunt | ◦ Docker & Helm | ◦ Istio / Service Mesh |
| ◦ AWS / GCP / Azure | ◦ Jenkins & GitHub Actions | ◦ Infrastructure as Code | ◦ GitOps |
| ◦ Linux (Ubuntu, RHEL) | ◦ VPC & Cloud Networking | ◦ Cloud Security / mTLS | ◦ CI/CD Pipelines |

Professional Experience

Inexture Solutions

Junior DevOps Engineer

Ahmedabad, India

May 2025 – Present

- Operate production-grade microservices workloads on private GKE clusters with Istio service mesh, enforcing mTLS-based internal communication, secure ingress routing, and zero-downtime traffic management across SaaS, fintech, and AI platforms.
- Design and maintain CI/CD pipelines using Jenkins and GitHub Actions for 10+ services spanning backend, frontend, and AI workloads, standardising deployment workflows with automated testing gates and rollback procedures.
- Led the containerised migration of Jenkins from legacy bare-metal infrastructure to a Docker-based architecture via staged rollout, improving reliability and scalability while maintaining near-zero production downtime.
- Deploy and secure cloud-native applications on AWS using Docker, Nginx reverse proxy, SSL/TLS termination, and CloudFront CDN, enforcing end-to-end encryption across all services.
- Troubleshoot container runtime issues, scaling bottlenecks, and deployment failures for multiple development teams, providing systematic root-cause analysis and resolution documentation.

Professional Development & Certification

Independent

March 2024 – May 2025

- Took a planned career break to manage critical family healthcare responsibilities; maintained continuous technical development throughout.
- Earned HashiCorp Certified: Terraform Associate (003) through structured self-study and hands-on cloud lab work.
- Deepened AWS cloud architecture knowledge through self-directed labs covering VPC design, IAM, EC2, S3, CloudFront, and cost-optimisation best practices.

Highskyit Solutions

DevOps Engineer

Ahmedabad, India

Feb 2023 – Feb 2024

- Led migration of 240+ Azure resources from manual provisioning to Terraform-based Infrastructure as Code, enabling version-controlled, repeatable deployments and eliminating manual change risk across environments.
- Engineered reusable Terraform modules and standardised naming conventions, reducing infrastructure code duplication by ~70% and accelerating new-environment provisioning.
- Provisioned and managed multi-environment AWS infrastructure using Terragrunt with environment-specific variable isolation and consistent remote state management across dev, staging, and production.
- Administered multi-account AWS environments using AWS Organizations, SCPs, and AWS SSO, enforcing least-privilege IAM controls and governance boundaries across teams.
- Automated infrastructure deployments via Bitbucket CI/CD pipelines with mandatory peer-reviewed workflows, improving deployment traceability and reducing infrastructure drift.

Key Projects

- **Childcare Platform – Microservices Platform (GCP)** *GKE • Istio • Cloud SQL • Kubernetes*
 - Designed and operated a production-grade microservices platform on private GKE clusters (Autopilot) with managed Anthos Service Mesh (Istio), implementing mTLS-based internal communication and private Cloud SQL connectivity.
 - Enforced RBAC-based administrative access and supported zero-downtime scaling and deployments for live production traffic across all environments.
- **AI/ML Platform Deployments – 7+ AI PoCs** *Jenkins • Docker • Nginx • SonarQube • Certbot • AWS*
 - Owned end-to-end deployment for 7+ AI/ML applications including *AI-Enterprise-GPT* (enterprise ChatGPT with OCR and multi-model support), *PolyverseAI* (multilingual AI communication), *Mock Interview AI* (video, resume analysis and scoring), *MassAI*, and *NextGenCaterAI* (Agentic AI catering recommendation platform).
 - Built Jenkins pipelines with SonarQube quality gates, Docker containerisation, Nginx reverse proxy, and Certbot TLS; supported monorepo architectures with conditional stages for independent frontend and backend deployments.
- **AI Trader Bot – Automated CI/CD & Cloud Deployment** *Jenkins • EC2 • S3 • CloudFront • Nginx • PostgreSQL • Redis*
 - Architected an end-to-end CI/CD pipeline using Jenkins for a containerised trading application, automating build, test, and deploy stages from commit to production.
 - Deployed backend on AWS EC2 and frontend on S3 with CloudFront CDN; configured Nginx reverse proxy, API authentication, PostgreSQL, and Redis caching for concurrent workload handling.
- **Multi-Tenant SaaS Platform** *Docker • Django • TypeScript • Nginx*
 - Built and deployed a multi-tenant SaaS platform with wildcard domain routing and tenant isolation via Nginx reverse proxy, supporting isolated customer environments on shared infrastructure.
 - Resolved production CORS, inter-service communication, and routing conflicts, achieving stable multi-tenant operation with no cross-tenant data exposure.
- **Liferay based web – Test-Gated CI/CD Pipeline** *Jenkins • CI/CD • Cost Optimisation*
 - Designed and implemented a test-gated CI/CD pipeline that validated builds before merge into the Dev branch, improving release reliability and reducing deployment risk across environments.
 - Provided cloud cost estimations to the client, supporting infrastructure planning and budget-aware provisioning decisions.
- **Kubernetes Cluster – Kafka & Zookeeper** *Kubernetes • DigitalOcean • Kafka • Zookeeper*
 - Designed and deployed a Kubernetes cluster on DigitalOcean to host Apache Kafka and Zookeeper services for distributed messaging, managing end-to-end infrastructure setup and deployment configuration.

Technical Skills

Cloud Platforms	AWS, Google Cloud Platform (GCP), Azure, DigitalOcean
Containers & Orchestration	Docker, Kubernetes (GKE), Helm, Istio, Anthos Service Mesh
Infrastructure as Code	Terraform, Terragrunt, AWS CDK (TypeScript), Ansible
CI/CD	Jenkins, GitHub Actions, GitLab CI/CD, Bitbucket Pipelines
Web & Networking	Nginx, DNS, SSL/TLS, mTLS, VPC Networking
Security	RBAC, IAM, AWS Organizations, SCPs, AWS SSO, Least-Privilege IAM
Monitoring & Logs	CloudWatch, Prometheus (Basic), SonarQube, Dozzle
Databases	PostgreSQL, MySQL, Redis, MongoDB
Operating Systems	Linux (Ubuntu, RHEL)

Certifications

- HashiCorp Certified: Terraform Associate (003)
- AWS Certified Cloud Practitioner
- Red Hat Certified System Administrator (RHCSA)

Education

Bachelor of Commerce (B.Com)
Maharishi Dayanand Saraswati University

Rajasthan, India
2020 – 2023
